

Datasource Configuration File

This configuration file sets the details on the datasource that Transfer is going to be connected to, and results in the [transfer.com.sql.Datasource](#) bean that is available from

<http://docs.transfer-orm.com/html/transferapi/transfer/TransferFactory.html>.

The xml schema file can be found at: </transfer/resources/xsd/datasource.xsd>.

It is **highly recommended** that when creating a new datasource xml file, you validate your xml against this xml schema.

Elements

- **datasource**

Top level element for the xml file.

- **name**

The name of the datasource as defined in the ColdFusion Administrator

- **username**

If a username is required with every query, specify it here. If not, leave blank.

- **password**

If a password is required with every query, specify it here. If not, leave blank.
