Example Code

Here you can download example applications that utilise Transfer to handle their data processing.

Sample applications always use the latest version of Transfer.

tBlog

([download](#))

This is a very simple blog that has users, posts, comments and post categories.

This example shows off all the different relationship/composition types very well, with lots of in-line commenting.

tPetmarket

([project link](#))

A Transfer version of the cfpetmarket application.

There are examples in this of using composite keys, as well as TQL and Decorators.

ColdBox Examples

([ColdBox sample page](#))

Several Sample applications that use [ColdBox](#), Transfer, and also [ColdSpring](#)

AppBooster

([Beta4 Download](#))

Sample Application by [Kurt Wiersma](#), that utilised [Mach-II](#), [ColdSpring](#) and Transfer.
