## Third Party Tools

These are third party tools that can be used in conjunction with Transfer, to greatly enhance its functionality.

### ColdSpring Bean Utilities

<http://coldspringutils.riaforge.org/>

While this contains many tools that are particular to ColdSpring, the TDOBeanInjectorObserver.cfc is an easy, and powerful way to inject Transfer Decorators with CFCs that are stored inside ColdSpring.

### TransferSync

<http://transfersync.riaforge.org/>

This is a library to work with Transfer to enable its cache to synchronise across clusters. A must if you need Transfer to scale across multiple servers.

### Illudium PU-36 Code Generator

<http://cfcgenerator.riaforge.org/>

This project generates ColdFusion components (i.e. bean, DAO, gateway, service), ColdSpring XML, Transfer XML, and ActionScript Value-Objects using the ColdFusion admin API and database introspection.

### Transfer Config

<http://transferconfig.riaforge.org/>

This application introspects a database by using the ColdFusion tag cfdbinfo and creates the Transfer ORM Config file based on setting you specify on the environment.xml file and the UI.

### Transfer Tag Library for Dreamweaver

[http://www.massimocorner.com/dreamweaver/coldfusion/transfer\\_orm.mxp](http://www.massimocorner.com/dreamweaver/coldfusion/transfer_orm.mxp)

Transfer tag library that enables code hints, Quick Tag Editor, Tag Chooser and Tag Inspector for Transfer tags

## **ValidateThis!**

<http://validatethis.riaforge.org/>

A validation framework that allows a developer to define validation rules for their Transfer objects in an xml file, and which automatically generates server-side and client-side validations from those rules.

## **Metro**

<http://metro.riaforge.org/>

Metro is a library of components to support rapid development of applications that use ColdSpring and Transfer ORM.

## **Transfer Snippet Library for CFEclipse**

<http://www.aliaspooryorik.com/blog/index.cfm/e/posts.details/post/transfer-orm-snippets-205>

A snippet library for the most common methods. Available as a zip archive or from the cfsnippets.org server.
